

# Model 9199

3-Link Long Reach Arm

This massive arm suspends a monitor weightlessly, while offering over 3½-feet of extension. The arm's three links provide full articulation, allowing you to position the monitor anywhere within the arm's sphere of movement.

The arm can be mounted behind the user, still allowing the monitor to swing around in front to face the user. A vertical range of 28" allows this arm to be used while sitting or standing. The arm is a good choice for dental operatories, patient rooms, operating rooms... anywhere space is at a premium yet monitor placement flexibility is required.

Model 9199 includes well-thought out cable management, allowing you to keep cords out of view by routing them within the arm structure.

## FEATURES

- ▲ Intuitive movement – no buttons or levers, simply move monitor to desired position
- ▲ 44.4" of horizontal range
- ▲ 28.28" of vertical range (+/-14.14" from horizontal)
